

**THOMSON REUTERS RELEASES CALAIS 2.0
WITH SUPPORT FOR YAHOO SEARCHMONKEY
AND THE WEB'S MOST POPULAR PUBLISHING PLATFORMS**

Teams with the Calais Community to Deliver Easy-to-Use Applications:

- *The Calais Tagaroo Plugin for the Wordpress Blogging Platform*
- *A Calais Module for the Drupal Publishing Platform*
- *The Calais QuickMeta Plugin for Yahoo! SearchMonkey and More*

The SemTech 2008 Conference – San Jose, CA – Monday, May 19, 2008 – In response to developer and industry demand, Thomson Reuters (NYSE: TRI; TSX: TRI; LSE: TRIL; NASDAQ: TRIN), the world's leading provider of intelligent information, has delivered significant upgrades to its Calais® Web Service and debuted a range of new Calais capabilities.

Found at OpenCalais.com (www.OpenCalais.com), Calais gives publishers and developers free, open access to automatic metatagging capabilities that increase the relevance and search accessibility of their content on the Web.

Calais version 2.0 features a dozen new semantic entity types, improving its utility for pop-culture publishers and bloggers covering media, music, entertainment and sports, as well as those covering pharmaceuticals, medicine and healthcare. It also adds code samples and libraries for accessing Calais, and offers two new output types – the Simple Tags format and Microformats – alongside the standard Resource Description Framework (RDF) option.

In addition, Calais 2.0 marks the debut of Thomson Reuters breakthrough Calais® QuickMeta™ plugin. Calais QuickMeta is a simple yet powerful plugin that makes it easy for publishers to generate and embed metadata in their content in preparation for Yahoo!®'s new SearchMonkey™ service as well as other metacrawlers and semantic applications.

Today, the company also debuted Calais® Tagaroo™ (<http://tagaroo.opencalais.com>), a Calais plugin for the Wordpress™ Publishing platform found at Wordpress.org. Calais Tagaroo makes it easy for Wordpress bloggers to tag the people, places, facts and events in their blog posts – and add relevant photos from Flickr™ -- to increase their visual appeal and accessibility on the Web. Calais Tagaroo works in the background while bloggers write, to automatically generate tags and find related photos for selection, sizing and insertion via an easy-to-use interface.

In related news, Thomson Reuters teamed with Phase2Technology™ to create a Calais module

for integration with Drupal™, an increasingly popular open source content management platform that supports a variety of Web sites, from blogs to large publishers and interactive communities (<http://drupal.org/>).

The Calais module for Drupal, (found at <http://drupal.org/project/opencalais>) makes it easy for Drupal users to automatically tag their content, generating rich Semantic metadata that can be shared via a simple key for integration into the larger content universe.

“We are humbled and gratified that more than 2,500 developers have joined the Calais community to work with the service, share ideas and help prioritize the development of our new features,” said Thomas Tague, Calais evangelist and project lead, Thomson Reuters. “We are also thrilled to provide bloggers and publishers of all sizes with new Calais plugins and modules that make it easy to kick-start metatagging and enter the era of the Semantic Web.”

Finally, the Calais community at OpenCalais.com (www.OpenCalais.com) has been re-launched and redesigned to reflect the new Thomson Reuters brand architecture, and to support a dramatic upgrade in Calais community features. These include robust and interactive forum services, advanced search and navigation as well as a host of other design and interaction features. Registered Calais users will not need to re-register for the site or Calais services.

About Calais

The Calais initiative supports the interoperability of content and advances Thomson Reuters mission to deliver pervasive intelligent information. It leverages the company’s substantial investment in semantic technologies and Natural Language Processing to offer free metadata generation services, developer tools and an open standard for the generation of semantic content. For more information or to get started with the Calais API, please visit OpenCalais.com (www.OpenCalais.com).
